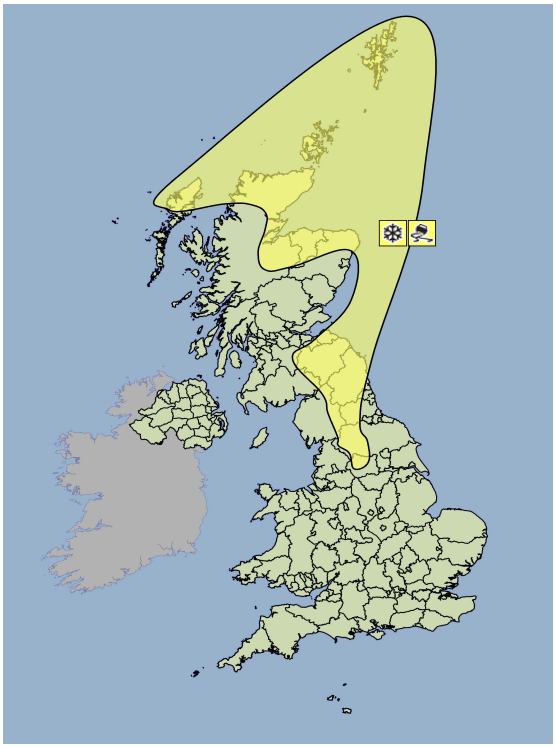
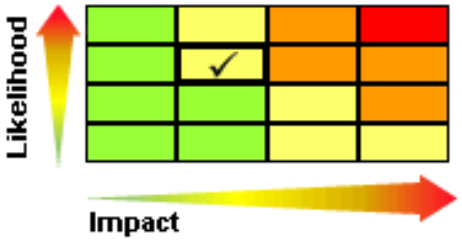
National Severe Weather Warning Service





Chief Forecasters Assessment
A more persistent area of rain, sleet and snow over southern parts of Scotland and parts of northern England will clear from the north during Saturday evening, but leaving behind some sleet and snow showers in places and an increasing risk of ice forming on untreated surfaces.

Meanwhile, a cold northeasterly flow will become established across much of Scotland with sleet and snow showers affecting areas exposed to the northeast. During Sunday morning, these showers will become more frequent over the far north of Scotland and the Northern Isles.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **00:05 on Sun, 14th Feb 2016** until **12:00 on Sun, 14th Feb 2016**

Showers of sleet and snow are likely during Saturday night and Sunday morning, leading to further accumulations of 2-5 cm of snow in places, with ice an additional hazard, particularly where skies clear after showers during Saturday.

Please be aware of the potential for difficult travelling conditions.
